SELECTRONIC®
PROXIMITY CONCEALED
URINAL FLUSH VALVE
1.0, 0.5 & 0.125 GPF

Concealed Flushometer for 3/4" Top or Back Spud Urinals

CLOG RESISTANT
• Self-cleaning piston valve prevents clogging and reduces maintenance.

ONE SENSOR FITS ALL
• Only 1 sensor for entire Selectronic™ line of faucets, urinals, and flush valves.
• Range can be adjusted manually or with optional remote control.
• Sensor Features Low Battery Indicator.

CAUTION: Use only American Standard supplied cable sets. Using non-AS supplied cables, or cutting, splicing or modifying any components will void the warranty.

NOTE TO INSTALLER: Please give this manual to the customer after installation.

To learn more about American Standard Selectronic® Products visit our website at: www.americanstandard-us.com or e-mail us at: CRTTEAM@americanstandard.com

For Parts, Service, Warranty or other Assistance, please call (844) CRT-TEAM / (844) 278-8326 (In Canada: 1-800-387-0369)
(In Toronto Area only: 1-905-306-1093)
Thank you for selecting American-Standard...the benchmark of fine quality for over 100 years. To ensure that your installation proceeds smoothly—please read these instructions carefully before you begin.

**UNPACKING**

All American Standard Products Are Water Tested At Our Factory. Some Residual Water May Remain In The Valve During Shipping.

Remove the Flush Valve items from the carton. The illustration below shows all items after they have been removed from the carton. Some items may be packaged partially assembled to other items.

1. Installation Instructions
2. Flush Valve Body Assembly
3. Cover Plate with Sensor
4. Electrical Box
5. Sweat Adapter
6. Stop Valve
7. Manual Override Hoses
8a. Vacuum Breaker Flush Connection (Top Spud)
8b. Vacuum Breaker Flush Connection (Back Spud)
9a. DC Standard Battery and Battery Holder
9b. AC Power Supply (Model# 6062)
10. 27" Cable Extension, Qty. (2)
11. Y-Adapter
12. 10' Extension

---

**SMALL PLATE CONCEALED URINAL FLUSH VALVES**

DO NOT REMOVE PROTECTIVE FILM FROM SENSOR EYE UNTIL INSTALLATION IS COMPLETE.

---

**VACUUM BREAKER FLUSH CONNECTIONS**

**RECOMMENDED TOOLS; Fig. 2**

1. Teflon Tape
2. Flat Blade Screwdriver
3. Adjustable Wrench
4. Tape Measure
5. Hacksaw
6. Tubing Cutter
7. File
8. For Sweat Connection; Solder and Torch
9. 2.5mm Hex Wrench
10. 1.5mm Hex Wrench

**PRIOR TO INSTALLATION**

Note: *Prior to installing the Selectronic™ Flush Valve the following items must be installed.*

1. Urinal
2. Drain line
3. Water supply line

**IMPORTANT:**

- All plumbing and electrical wiring must be installed in accordance with applicable codes, regulations and standards.
- The use of water hammer arrestors is strongly recommended for commercial applications. All piping behind the walls should be properly secured and fastened.
- Water supply lines must be sized to provide an adequate volume of water for each fixture.
- Flush all water lines prior to operation (See Step 3). Dirt and debris can cause flush valve to run continuously.
- With the exception of Stop Valve inlet, DO NOT use pipe sealant or plumbing grease on any valve component or coupling!
- Protect the chrome or special finish on chrome plated items.
  DO NOT USE toothed tools on finished surfaces to install or service these valves. Also see “Care and Cleaning” section of this manual.
- This product contains mechanical and/or electrical components that are subject to normal wear. These components should be checked on a regular basis and replaced as needed to maintain the valve’s performance.

**GENERAL DESCRIPTION:**

**SELECTRONIC™ PROXIMITY URINAL FLUSH VALVE**

Concealed Flushometer for 3/4” Spud Fixtures

Exclusive, self cleaning piston-type flush valve with proximity operation and manual override. Operates on DC (battery) or AC power. Recommended operating pressure 25psi (flowing) to 80 psi (static). Can install left or right-handed. Detection Zone can also be adjusted manually, or with optional remote control.

**Fig. 1 Roughing-in Dimensions**

*Note: The Critical Line (C-L) on Vacuum Breaker must typically be 6” (152mm) min. above fixture. Consult Codes for details.*
**FLUSH VALVE INSTALLATION**

**1 INSTALL ELECTRICAL BOX; Fig. 3**

1. Cut a 127x127mm (5”x 5”) opening in finished wall for ELECTRICAL BOX (1) at the dimension shown.

2. Rotate the 4 MOUNTING TABS (2) flat against the electrical box. Holding the MOUNTING TABS (2) in position, install the ELECTRICAL BOX (1) into the opening. Make sure the MOUNTING TABS (2) are behind the wall.

3. Tighten the 4 MOUNTING SCREWS (3) until the ELECTRICAL BOX (1) is almost secure in the wall. Before tightening fully, rest a level at the top edge of the ELECTRICAL BOX (1) and make sure the box is level.

4. Cut a 2” hole for outlet pipe at dimension shown.*

**2 INSTALL SWEAT ADAPTER; Fig. 4**

**CAUTION** Turn water supplies off before beginning

*Note:* Stop valve inlet is 3/4” NPT. For optional sweat connection, *install Sweat Adapter (1) (Supplied) for 3/4” copper pipe supply line.*

1. Clean the end of the supply pipe. Push the threaded ADAPTER (1) until it is seated against the internal stop. Sweat the ADAPTER (1) to the pipe.

2. Install the STOP VALVE (2) to the water supply line with the outlet positioned as required (Behind the Wall).

3. Support piping as required.

**3 FLUSH OUT SUPPLY LINES; Fig. 5**

1. Open STOP VALVE (1).

3. Turn on water supply to flush line of any debris or sediment.

4. Close STOP VALVE (1) and turn off water supply line.
**4 INSTALL VACUUM BREAKER AND FLUSH CONNECTIONS; Fig. 6**

1. Place the SPUD FLANGE (1) over the spud on the Fixture. Fig. 6.

2. Place FRICITION WASHER (3) and SEAL WASHER (4) inside SPUD COUPLING NUT (2) and thread onto Spud. Do not tighten fully. Fig. 6.

3. Remove the ELBOW COUPLING NUTS (6, 6a) from the CHROME ELBOW (5). Make sure there are a RUBBER (7) & FIBER GASKET (8) in each. Fig. 6a.

4. With the flange end up, slide the FIBER GASKET (8) and ELBOW COUPLING NUT (6) onto the VERTICAL OUTLET PIPE (9). Place the RUBBER GASKET (7) onto the flange. Now connect the ELBOW COUPLING NUT (6) to the CHROME ELBOW (5) and tighten fully.

5. Insert the VERTICAL OUTLET PIPE (9) with CHROME ELBOW (5) assembly into the SPUD COUPLING NUT (2) and push it down. Do not tighten fully. Fig. 6a.

**Note:** Cutting the VERTICAL OUTLET PIPE (10) may be necessary for the CHROME ELBOW (5) center line to line up with opening in the wall.

6. Measure and cut the HORIZONTAL OUTLET PIPE (10) to length required. Fig. 6b.

**Important:** Make sure that there is a minimum of 1-1/4" for engagement with coupling when making your measurement.

7. With the flange end toward the BRASS ELBOW (11) slide the FIBER GASKET (12) and ELBOW COUPLING NUT (13) onto the HORIZONTAL OUTLET PIPE (10). Place the RUBBER GASKET (14) between the flange and the BRASS ELBOW (11) and fully tighten. Fig. 6b.

8. From behind the wall, insert the assembled BRASS ELBOW and HORIZONTAL OUTLET PIPE (11, 10) through the hole in the wall. Install WALL ESCUTCHEON (15) onto the HORIZONTAL OUTLET PIPE (10). Slide the ELBOW COUPLING NUT (6a) and TAPERED RUBBER WASHER (7a) onto the HORIZONTAL OUTLET PIPE (10). Push the HORIZONTAL OUTLET PIPE (10) into the CHROME ELBOW (5). Tighten ELBOW COUPLING NUT (6a) but not fully. Fig. 6b.

9. For back spud installations: Follow steps #1 and #2 to install the spud coupling kit. Push the HORIZONTAL OUTLET PIPE (10) into the spud connection on the back of the fixture. Do not tighten fully. Fig. 6b.

10. All Installations: If required, cut VACUUM BREAKER PIPE (17), leave a minimum of 1-1/4" (32mm) of pipe to ensure engagement with compression coupling. Assemble the ELBOW COUPLING NUT (13a) and TAPERED RUBBER WASHER (14a) onto the VACUUM BREAKER PIPE (17). Install VACUUM BREAKER PIPE (17) into BRASS ELBOW (11) and hand tighten ELBOW COUPLING NUT (13a). Fig. 6c.

**Note:** If cutting VACUUM BREAKER PIPE (17) to size, note that Critical Line (C/L) on Vacuum Breaker must typically be 6" (152mm) above fixture. Consult Code for details.
5 INSTALL FLUSH VALVE; Fig. 7

1. Insert the side ADJUSTABLE TAILPIECE (1) on the FLUSH VALVE (2) into the STOP VALVE (3). Lubricate the TAILPIECE O-RING (4) with water if necessary. Thread the COUPLING NUT (5) onto the STOP VALVE (3) and tighten lightly. Fig. 7.

Important: Do not use lubricants (other than water) or any type of thread sealing paste or tape.

6 CONNECT FLUSH VALVE TO VACUUM BREAKER TUBE; Fig. 8

1. Align the FLUSH VALVE BODY (2) directly above the VACUUM BREAKER TUBE (7) and VACUUM BREAKER COUPLING NUT (6). Make sure that GASKET (10) is installed.

Note: There is a +13mm, -6mm (+1/2"-1/4") tolerance for the 121mm (4-3/4) dimension.

2. Pull the VACUUM BREAKER TUBE (7) up to meet the threaded FLUSH VALVE (2) and hand tighten the COUPLING NUT (6). Align all components of the flush valve assembly.

3. Lightly tighten the TAILPIECE COUPLING NUT (5) connection first, then the VACUUM BREAKER COUPLING NUT (6) and finally the SPUD COUPLING NUT (9). Once aligned correctly, use a wrench to tighten all couplings to make water tight connections.

4. Secure piping behind wall as required.
7 DC VERSION; Fig. 9, 10

1. Attach the SAFETY CHAIN (1) from the COVER PLATE (2) to the MOUNTING POST (3) as shown. Fig. 9.

2. Connect one end of the 27” EXTENSION CABLE (1) to one SENSOR CABLE (2). Connect the other end of the 27” EXTENSION CABLE (1) to the SOLENOID CABLE (3). Fig. 10.

3. Insert BATTERY (6) into BATTERY HOLDER (4), making sure terminal side is inserted first. Fig. 10.

4. Connect BATTERY HOLDER (4) to available SENSOR CABLE (5). Place BATTERY HOLDER (4) inside electrical box. Fig. 10.

8 AC VERSION; Fig. 9, 10a

1. Attach the SAFETY CHAIN (1) from the COVER PLATE (2) to the MOUNTING POST (3) as shown. Fig. 9.

2. Connect one end of the first 27” EXTENSION CABLE (4) to one SENSOR CABLE (5). Connect the other end of the 27” EXTENSION CABLE (4) to the SOLENOID CABLE (6). Fig. 10a.

3. Connect AC POWER SUPPLY (8) to the single terminal of the Y-ADAPTER (10). Fig. 10a.

4. Connect one end of the second 27” EXTENSION CABLE (7) to one of the two available terminals of Y-ADAPTER (10), and the other end of the 27” EXTENSION CABLE (7) to available SENSOR CABLE (9). Fig. 10a.

5. Plug AC POWER SUPPLY (8) into outlet. Fig. 10a.

6. Place Y-ADAPTER (10) inside electrical box.
MULTI-AC VERSION (DAISY-CHAIN); Fig. 11

Important: Disconnect AC Power Supply from wall outlet before making daisy-chain connections.

Note: For Unit #1 installation instructions, refer to AC version section (page 6).

For subsequent Units...

1. Take the first 27” EXTENSION CABLE (1) and connect one end to the solenoid cable, the other end to a sensor cable.

2. Take the second 27” EXTENSION CABLE (2) and connect one end to the available sensor cable, the other end to one of the two terminals at the one end of the Y-ADAPTER (3).

3. Take the 10’ EXTENSION (4) and connect one end to the single terminal of Y-ADAPTER (3), and the other end to available terminal of the previous unit's Y-ADAPTER (3a).

4. Repeat process for each subsequent unit.

5. Place Y-ADAPTERS (3) into respective electrical box.

6. Plug in AC power supply into wall outlet once all daisy-chain unit connections have been made.

CAUTION: Use only American Standard supplied cable sets. Using non-AS supplied cables, or cutting, splicing or modifying any components will void the warranty.
10 INSTALL COVER PLATE; Fig. 12

1. Install the two TABS (1) on the back side of COVER PLATE (2) into the two SLOTS (3) located on the top edge of the ELECTRICAL BOX (4).

2. Push on the bottom edge of the COVER PLATE (2) until it snaps into place. If COVER PLATE (2) will not snap into place, then loosen the MOUNTING SCREWS (6) on the ELECTRICAL BOX (4) slightly.

3. To remove COVER PLATE (2), insert WIRE KEY (5) (supplied) into the two holes located at the bottom of the COVER PLATE (2). Push the WIRE KEY (5) up until it releases the bottom clips. Pull the bottom edge away and lift the COVER PLATE (2) off.

11 CONNECT OVERRIDE HOSES, AC & DC POWER; Fig. 13

1. Push the BLACK HOSE (1) into the BOTTOM HOSE CONNECTOR (2) on flush valve body and push the other end into the back of the MANUAL OVERRIDE VALVE (3).

2. Push the BLUE HOSE (4) into the TOP HOSE CONNECTOR (15) on flush valve body and push the other end into the BOTTOM CONNECTOR (6) of the manual override valve.
MAINTENANCE

A INSTALL NEW BATTERY; Fig. 14

1. Remove the COVER PLATE (1). For removing front panel instructions, see Step 10.

2. Remove old BATTERY (2) from BATTERY HOLDER (4). Install the new BATTERY (3), making sure the shape of the BATTERY (3) follows the shape of the BATTERY HOLDER (4).

3. Install COVER PLATE (1).

B ADJUST STOP VALVE; Fig. 15

IMPORTANT: To avoid overflowing, the STOP VALVE (2) must never be opened to the point where the flow from the valve exceeds the flow capacity of the fixture. Valve is designed to provide stated flush volume with a 10 GPM flow rate.

1. After installation is complete, peel off the PROTECTIVE FILM (1) from the sensor. Standing to one side, block the sensor with your hand for 10 seconds. Remove your hand and listen for audible “click” from within the valve.

2. Turn on STOP VALVE (2) 1/4 turn to 1/2 turn (CCW) and test for leaks.

Note: Unit may flush for approximately 5 to 10 seconds when water is first turned on. If flow persists, turn water off and repeat step #1 above.

3. Actuate the FLUSH VALVE:
   A) Cover sensor with hand for 10 seconds.

   NOTE: Stand outside of sensor detection area.

   B) Remove hand from detection area; unit will flush in approximately 3 seconds.

4. Adjust STOP VALVE (2) after each flush until the stated flush volume is achieved, no splashing occurs and the fixture is properly cleansed.
**SET DETECTION RANGE**
(If Required); Fig. 16 & 17.

Note: The detection distance is preset and ideal for most installations. Should an adjustment be required, follow the steps below.

1. Remove COVER PLATE (1). See Step 10 for front panel removal instructions.

2. Disconnect SENSOR CABLE (2) from BATTERY HOLDER (3) or from POWER SUPPLY 27" EXTENSION CABLE (4). Fig. 16.

3. Keeping hands away from the front of the sensor, reconnect the SENSOR CABLE (2). Do not secure the COVER PLATE (1) at this time. Fig. 16.

Note: You have 5 seconds to begin entering the program code after power connection is made.

4. While the SENSOR CONTROL LED (5) is blinking slowly, place your hand 1 to 2". (30-50mm.) in front of the sensor. Fig. 17.

5. When the LED (5) stops blinking and stays "ON", move your hand to the desired position from sensor and hold in place until the LED (5) begins to blink again. Fig. 17.

Note: Detection Zone is 400mm - 800mm.
(Factory Setting: 400mm)

6. Once the SENSOR CONTROL LED (5) begins to blink again, remove your hand from the detection zone. When the flashing stops, the detection distance is set.

7. Replace and secure COVER PLATE (1).

8. Actuate the FLUSH VALVE:
   A) Cover sensor with hand for 10 seconds.
   
   Note: Stand outside of sensor detection area.

   B) Remove hand from detection area; unit will flush in approximately 3 seconds.

---

**CARE INSTRUCTIONS:**

**DO:** CLEAN WITH CLEAR WATER. DRY WITH A SOFT COTTON FLANNEL CLOTH.

**DO NOT:** DO NOT CLEAN THE PRODUCT WITH SOAPS, ACID, POLISH, ABRASIVES, HARSH CLEANERS, OR A CLOTH WITH A COARSE SURFACE.
