For Parts, Service, Warranty or other Assistance, please call (844) CRT-TEAM / (844) 278-8326 (In Canada: 1-800-387-0369) (In Toronto Area only: 1-905-306-1093)
TOOLS REQUIRED;  

1. Channel Locks  
2. Adjustable Wrench  
3. Phillips Screwdriver  
4. Flat Blade Screwdriver  
5. Electric Drill & 1/4” Drill Bit  
6. Tape Measure

Thank you for selecting American-Standard...the benchmark of fine quality for over 100 years. To ensure that your installation proceeds smoothly--please read these instructions carefully before you begin.

UNPACKING

All American Standard Faucets Are Water Tested At Our Factory. Some Residual Water May Remain In The Faucet During Shipping.

1. Remove the Mixing Valve and loose items from the carton. The picture below shows the Mixer and all loose items after the carton has been opened.

1. Mixing Valve and Box  
2. Supply Hoses  
3. Mounting Kit  
4. Installations instructions
**INSTALLATION**

1. **MOUNT ENCLOSURE; Fig. 3**
   1. Remove the bottom SUPPLY HOSE (1) from the SELECTRONIC FAUCET CONTROL BOX (2). Fig. 3
   2. Remove BOTTOM PLUG (3) from SELECTRONIC FAUCET CONTROL BOX (2). Fig. 3
   3. Remove 4 screws from MIXER ENCLOSURE COVER (2) and pull off COVER (2). Fig. 3b
   4. Remove MIXING VALVE (7) from ENCLOSURE (3).
   5. Install MIXER ENCLOSURE (4) under SELECTRONIC FAUCET CONTROL BOX (2) as shown in Fig. (3a). Hold the MIXER ENCLOSURE (4) in that location and mark the four mounting hole locations as shown. Fig. (3a). **NOTE:** MIXER ENCLOSURE SUPPLY HOSES are 20" long. Distance between wall valves and MIXER ENCLOSURE (4) must be taken into consideration.
   6. The ENCLOSURE (4) works best if secured to a wall stud or cross brace within the wall, using the SCREWS (5) supplied. If the MIXER ENCLOSURE (4) is to be installed on a tile or plaster wall the ANCHORS (6) and SCREWS (5) should be used.
   6. For installations on drywall or tiled walls; use ANCHORS (6) and SCREWS (5) for securing MIXER ENCLOSURE (4) to finished wall. Drill four 1/4" dia. holes a minimum of 1-3/4" deep. Insert the four ANCHORS (6) flush with face of the finished wall. Align the MIXER ENCLOSURE (4) and Install the MOUNTING SCREWS (5). Tighten to secure MIXER ENCLOSURE (4) to mounting surface.

2. **CONNECT MIXING VALVE; Fig. 4**
   1. Install MIXING VALVE (1) back into ENCLOSURE.
   2. Install FIBER SEAL WASHER (4) on MIXING VALVE NIPPLE (3). Hold MIXING VALVE (1) in place with one hand and with your other hand thread SWIVEL NUT (2) onto MIXING VALVE NIPPLE (3). Fig. 4. Use an adjustable wrench to tighten SWIVEL NUT (2). Fig. 4a.
   3. Replace ENCLOSURE COVER and tighten securely.

3. **CONNECT MIXING VALVE TO WATER SUPPLIES; Fig. 5**
   1. Turn off hot and cold water supplies before beginning.
   2. Connect FLEXIBLE SUPPLIES (1, 2) directly to wall supplies. Connection on MIXER supplies are 3/8" compression. Connect left supply to Hot and right supply to Cold wall supply. Use adjustable wrench to tighten connections. Do not over tighten. **FIG. 5.**
   3. Faucet supplies measure 20" from the bottom of the ENCLOSURE (3) base.

**Note:** If additional supply length is required, installer must purchase parts separately.

**Important:** If SUPPLY HOSES (1, 2) are too long, loop as to avoid kinking.
**ADJUST TEMPERATURE**

4. **TO ADJUST TEMPERATURE; Fig. 6**

1. Adjust temperature by inserting a 4mm Hex Wrench into hex opening in the side of enclosure. Fig. 6.

2. To decrease temperature, rotate up. (clock-wise)

3. To increase temperature, rotate down. (counter-clockwise).

---

5. **ADJUST HOT-LIMIT SAFETY STOP; Fig; 7, 7a, 7b**

1. Remove MIXING VALVE (1) from the enclosure.

2. Remove HOT-LIMIT SAFETY STOP (2) from MIXING VALVE (1) by pulling. Fig. 7.

3. With a 4mm Hex Wrench set the temperature, detailed in section 4, to the desired hot limit. Fig. 7a.

4. Reinstall the HOT-LIMIT SAFETY STOP (2) on to the MIXING VALVE (1). Fig. 7b.
   a. The orientation of HOT-LIMIT SAFETY STOP (2) while being pushed back on to MIXING VALVE (1) is key to regulating the hot limit. STEP (3) on the hot-limit safety stop should collide with STEP (4) on the mixing valve preventing further counter clockwise rotation thus preventing the temperature from being increased beyond that point.

5. Reinstall MIXING VALVE (1) back into the enclosure.
